The **Softmart License Management System (SLMS)** is an online portal that facilitates the logistics of large-scale Enterprise Agreement management. It is designed to address the full life cycle of a software license asset. Software licenses are managed through request, approval, acquisition and deployment. The application of the concept of license transfer and recycling harnesses unused and under-used assets to fulfill licensing needs with inventory in lieu of new purchases.

The management of Enterprise Agreements and the True Up process is augmented through the use of the portal.

DID YOU KNOW:

Software Publishers dictate the terms of their licensing. These terms are subject to change. Let us help keep track of exactly what you are entitled to use.

Microsoft's recent release of SQL 2012 changed the licensing model for the Enterprise Edition to a per Core model?

RELATED SERVICES:

Software Asset Management (SAM): SAM Services are available "point in time audit" protection.
